

CONT'D.

0893430 12099

44. A putative protective antigen against a Mycoplasma, prepared by a method including providing a sample of a Mycoplasma; an antibody probe including at least antibody against a Mycoplasma produced by a method including providing a biological sample taken a short time after an immune animal has been challenged with a Mycoplasma or Mycoplasma extract taken from the infection site or an area of a lesion or an area close to the infection site or lesion; isolating cells from the biological sample; culturing cells in vitro in suitable culture medium; and harvesting antibodies produced from said cells; probing the Mycoplasma sample with the antibody probe to detect at least one antigen; and isolating the antigen detected.

45. A putative protective antigen against Mycoplasma hyopneumoniae, or related infections, selected from the group of antigens having approximate molecular weights of 110-114, 90-94, 72-75, 60-64, 52-54 and 46-48 kilodaltons (kD), mutants, derivatives and fragments thereof.

46. A putative protective antigen according to claim 45 wherein the antigen in the 72-75 kD region contains the following N-terminal amino acid sequence:
AGXLQKN\$LL\$E\$VWYLAL

47. A putative protective antigen according to claim 46 further including one or more of the following internal amino acid sequences:
AKNFDFAPSIQGYKKIAHEL
NLKPEQILQLLG
LLKAEXNKXIEEINTXLDN

48. A putative protective antigen according to claim 45 wherein the antigen in the 60-64 kD region contains the following N-terminal amino acid sequence:

MKLAKLLKGFX(N/L)(M/V)IK, or
ADP(F/I)(R/E)Y(V/A)PQG(Q/A)X(M/N)VG

5

49. A putative protective antigen according to claim 45 wherein the antigen in the 52-54 kD region contains the following N-terminal amino acid sequence:

AGXWAKETTKEEKS

10 50. A putative protective antigen according to claim 49 further including one or more of the following internal amino acid sequences:

AWVTADGTVN
AIVTADGTVNDNKPNQWVRKY

15 51. A putative protective antigen according to claim 45 wherein the antigen in the 46-48 kD region contains the following N-terminal amino acid sequence:

AGXGQTESGSTSDSKPQAETLKHKV

20 52. A putative protective antigen according to claim 51 further including one or more of the following internal amino acid sequences:

TIYKPDKVLGKVAVEVLRVLIAKKNKASR
AEQAITKLKLEGFDTQ
KNSQNKIIDLSPEG

25 53. An isolated nucleic acid fragment encoding a putative protective antigen against Mycoplasma hyopneumoniae or related infections, said nucleic acid fragment including the following sequence, mutants, derivatives, recombinants and fragments thereof:

25						

54. A method for producing an antibody against a Mycoplasma including providing a biological sample taken a short time after an immune animal has been challenged with a Mycoplasma or Mycoplasma extract taken from the infection site or an area of a lesion or an area close to the infection site or lesion;

isolating cells from the biological sample;

culturing cells in vitro in a suitable culture medium; and
harvesting antibodies produced from said cells.

55. A method according to claim 54 wherein the biological sample is taken
approximately 2 to 7 days after the animal has been challenged with the
Mycoplasma.

56. A method according to claim 55 wherein the culturing of cells in vitro
further includes addition of helper factors to the culture, said helper factors
selected from the group including cytokines used alone or in combination,
including interleukin 1, 2, 3, 4, 5, 6, 7 and 8, colony stimulating factors,
interferons and any other factors that may be shown to have an enhancing
effect on specific B cell secretion.

57. A method according to claim 56 further including a cell activation step
including activating the cells isolated to proliferate and secrete and/or release
antibodies, said cell activation step including adding a cell activating agent to
the culture medium, said cell activating agent selected from the group including
mitogens and helper factors produced by leukocytes, or
their synthetic equivalents or combinations thereof.

58. A method according to claim 57 wherein the antibody is in the form of
the supernatant harvested from the culture medium.

59. An antibody against a Mycoplasma prepared according to the method of
claim 54.

60. A method of identifying a putative protective antigen associated with a
Mycoplasma, said method including
providing

a sample of a Mycoplasma; and

an antibody probe including at least one antibody against a

Mycoplasma;

probing the Mycoplasma sample with the antibody probe to detect at least one antigen; and

isolating the antigen detected.

5

61. A method of purifying a putative protective antigen associated with a Mycoplasma, said method including providing

a crude antigen mixture; and

an antibody against a Mycoplasma immobilized on a suitable

10 support;

subjecting the crude antigen mixture to affinity chromatography utilizing the immobilized antibody; and

isolating the purified antigen so formed.

15 62. A method for preparing a synthetic antigenic polypeptide against Mycoplasma, which method includes

providing

a cDNA library or genomic library derived from a sample of Mycoplasma; and

20 an antibody probe including an antibody prepared according to claim 54;

generating synthetic polypeptides from the cDNA library or genomic library;

probing the synthetic polypeptides with the antibody probe; and

25 isolating the synthetic antigenic polypeptide detected thereby.

63. A method according to claim 62 wherein the antibody probe includes an antibody raised against an antigen against Mycoplasma hyopneumoniae, or related infections selected from the group of antigens having approximate
30 molecular weights of 110-114, 90-94, 72-75, 60-64, 52-54 and 46-48 kilodaltons (kD), mutants, derivatives and fragments thereof.

64. A synthetic putative protective antigen produced by the method of claim 62.

5 65. A vaccine or veterinary composition including a prophylactically effective amount of at least one putative protective antigen against a Mycoplasma according to claim 45.

66. A vaccine or veterinary composition according to claim 65 including a plurality of putative protective antigens.

10

67. A vaccine or veterinary composition including an antibody against a Mycoplasma according to claim 59.

68. A diagnostic kit including an antigen according to claim 45.

15

69. A method for preventing or treating a Mycoplasma infection, which method including administering to an animal a prophylactically or therapeutically effective amount of at least one putative protective antigen according to claim 45.

20

70. An isolated DNA fragment encoding a putative protective antigen against Mycoplasma or related infections, said DNA fragment having a nucleic acid sequence according to Figure 6 or an homologous sequence, and functionally active fragments, mutants, variants or recombinants thereof.

25

71. A clone including a DNA fragment according to claim 70.

72. A clone according to claim 71 which is clone pC1-2

30

73. An amino acid sequence or functional equivalent thereof encoded by the DNA fragment according to claim 70.
